DigitalSkys to Expand VoIP Offerings with Go2Call

Evanston, IL Feb. 20th, 2006- Go2Call.com, Inc., an international VoIP solutions provider, announced today that DigitalSkys, a Dubai-based, next generation wireless communications provider, will use Go2Call's award winning platform to enhance current VoIP offerings to various customers, including small corporate companies, large conglomerates and government agencies. Go2Call will enable DigitalSkys to offer these customers flexible, high quality and feature-rich VoIP calling solutions.

As neighbouring presenters at GITEX Dubai 2005, Go2Call and DigitalSkys initially met at the Fall tradeshow. Go2Call's reputation as an international caliber VoIP solutions provider appealed to DigitalSkys. Though DigitalSkys had previously worked with other VoIP service providers, it appeared that Go2Call's dynamic solutions might deliver them better results. After learning more about Go2Call, DigitalSkys began a thorough screening process of the company's services. During the trials, Go2Call exceeded DigitalSkys' quality and reliability standards and DigitalSkys selected Go2Call for its broad range of VoIP services and the multi-level management and flexible rate setting capabilities of the Go2Call Platform.

"With the rapid growth of the wireless satellite communications industry, we needed a provider that would allow DigitalSkys to continue to take advantage of the changing opportunities in the market. While providing our subscribers with high quality voice services, the Go2Call Platform additionally gives us the scalability and flexibility to offer a wide range of VoIP solutions and implement them quickly and easily," stated Charles D'Alberto, CEO of DigitalSkys.

Go2Call and DigitalSkys expect further technological development and look forward to future product launches. "We are excited to help DigitalSkys expand its VoIP offering with industry-leading VoIP applications and are glad to grow our market reach with them," said Larry Spear, Go2Call Co-Founder.

About DigitalSkys

DigitalSkys represents the next generation in global telecommunications, combining cutting-edge technologies with ease of use and an unbeatable focus on service. As a 'last-mile' wireless communications provider, DigitalSkys uses satellite based VSAT platforms, WiMAX and Wi-Fi technologies, to ensure that it can provide a reliable broadband enterprise-class solution in the Middle East and beyond, by means of NSS-6, NSS-7, and C-band AMC12 satellites footprints. DigitalSkys caters to various customers ranging from small corporate companies to large conglomerates with multiple offices in different locations and require high quality bandwidth and connectivity to run critical business applications. DigitalSkys provides wireless solutions to public, government and private sectors, including oil and gas, power generation, medical, financial, airline, security and defense, hospitality, education and training, manufacturing and construction, advertising distribution.

DigitalSkys' strength is providing wireless high-speed solutions using the above mentioned technologies and applications independently or in concert, tailored to specific corporate requirements -- a complete value-added business solution.

About Go2Call

Go2Call delivers a complete suite of global turnkey VoIP solutions to providers worldwide. Go2Call's proprietary platform enables carriers and resellers, ISPs, communications license holders, call shops and distributors to offer powerful VoIP services, while building equity in their brands and reducing capital expenditure.

Steadily growing for the past 6 years, Go2Call has built a reputation as a global leader in the development and delivery of these low cost, high quality hosted VoIP calling services and is the back-office provider to over 200 customers in nearly 100 countries. Key Go2Call customers include Fujitsu's Nifty, VSNL and Teleglobe.
